

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. - 8. (Cancelled)
9. (Previously Presented) A substitute fulfillment system comprising:
  - a database comprising worker records, said worker records having information associated with workers for each of the organizations, and substitute records, said substitute records having information associated with at least one substitute worker;
  - a server coupled to the database, the server is configured for:
    - receiving, from an organization, an absentee list of one or more absent workers via at least one communication link coupled to the server;
    - generating in response to receiving the absentee list one or more lists of one or more potential substitute workers who can fill in for each absent worker on the absentee list using the worker records associated with the absent worker and the substitute records; and
    - contacting potential substitute workers listed on each of the generated lists until one of the substitute workers in each of the generated lists agrees to fill in for the absent worker or until all of the generated lists are exhausted.
10. (Original) The substitute fulfillment system of claim 9 wherein each of the least one communication link is a link selected from the group consisting of a telephone communication link or an Internet communication link.
11. (Original) The substitute fulfillment system of claim 9 wherein the server generates the list of one or more substitute workers using a preferred list of substitute workers associated with the worker record for the absent worker.

12. (Original) The substitute fulfillment system of claim 9 wherein the server is further configured to generate a list of substitute workers and names of the absent workers who the substitute workers will be filling in for a given organization and to transmit the generated list of substitute workers and names of the absent workers who the substitute workers will be filling in for to the given organization via the at least one communication link.

13. (Original) The substitute fulfillment system of claim 9 further comprising an interactive voice response system controlled by the server for interacting with a potential substitute worker from the generated list of potential substitute workers via at least one telephone communication link whereby the potential substitute worker is secured for filling in for the absent worker.

14. (Original) The substitute fulfillment system of claim 9 wherein the server is further configured to receive a message via the at least one communication link and to forward the received message to the substitute worker who agrees to fill in for the absent worker via the at least one communication link.

15. (Original) The substitute fulfillment system of claim 9 wherein the organizations are unaffiliated.

16. (Original) The substitute fulfillment system of claim 9 wherein the workers are teachers and the substitute workers are substitute teachers.

17. – 20. (Cancelled)

21. (Previously Presented) A method for performing substitute fulfillment comprising:  
receiving, from an organization, an absentee list of one or more absent workers via at least one communication link;

generating in response to receiving the absentee list a list of one or more potential substitute workers who can fill in for each absent worker on the absentee list using worker records having information associated with the absent worker and substitute records having information associated with at least one substitute worker; and

contacting potential substitute workers listed on each of the generated lists until one of the substitute worker in each of the generated lists agrees to fill in for the absent worker or until the generated list is exhausted for each generated list until all of the generated lists are exhausted.

22. (Previously Presented) A method for performing substitute fulfillment comprising:  
generating a list of positions of absent workers that need to be filled by substitute workers;

posting the list of positions of absent workers that need to be filled by substitute workers on a website;

receiving a response by a substitute worker selecting a posted position on the website via an Internet communication link; and

securing via the Internet communication link the substitute worker who selected the posted position to fill in for the absent worker.

23. (Previously Presented) A method for performing substitute fulfillment comprising:  
generating a list of positions of absent workers that need to be filled by substitute workers in response to a connection to a server;

posting the list of positions of absent workers that need to be filled by substitute workers via an instant messaging system;

receiving a response by a substitute worker selecting a posted position on the website via the instant messaging system; and

securing via the instant messaging system the substitute worker who selected the posted position to fill in for the absent worker.

24. (Cancelled)

25. (Previously Presented) A computer-readable medium bearing instructions for performing substitute fulfillment, said instructions being arranged to cause one or more processors upon execution thereof to perform the steps of:

receiving, from an organization, an absentee list of one or more absent workers via at least one communication link;

generating in response to receiving the absentee list a list of one or more potential substitute workers who can fill in for each absent worker on the absentee list using worker records having information associated with the absent worker and substitute records having information associated with at least one substitute worker; and

contacting potential substitute workers listed on each of the generated lists until one of the substitute worker in each of the generated lists agrees to fill in for the absent worker or until the generated list is exhausted for each generated list until all of the generated lists are exhausted.

26. (Previously Presented) A computer-readable medium bearing instructions for performing substitute fulfillment, said instructions being arranged to cause one or more processors upon execution thereof to perform the steps of:

receiving absentee information representing an absent worker via at least one communication link;

generating a list of positions of absent workers that need to be filled by substitute workers;

posting the list of positions of absent workers that need to be filled by substitute workers on a website;

receiving a response by a substitute worker selecting a posted position on the website via an Internet communication link; and

securing via the Internet communication link the substitute worker who selected the posted position to fill in for the absent worker.

27. (Previously Presented) A computer-readable medium bearing instructions for performing substitute fulfillment, said instructions being arranged to cause one or more processors upon execution thereof to perform the steps of:

generating a list of positions of absent workers that need to be filled by substitute workers in response to a connection to a server;

posting the list of positions of absent workers that need to be filled by substitute workers via an instant messaging system;

receiving a response by a substitute worker selecting a posted position on the website via the instant messaging system; and

securing via the instant messaging system the substitute worker who selected the posted position to fill in for the absent worker.

28. (Previously Presented) A system comprising:

a database comprising worker records having information associated with workers and substitute worker records having information associated with substitute workers;

a server coupled to the database, the server is configured to:

post a list of one or more positions of one or more absent workers that need to be filled by a substitute worker who is qualified to fill the one or more positions in response to a substitute worker connecting to the server, where the list is generated using the worker records of the one or more absent workers and the substitute record for the substitute worker connecting to the server;

receive a response from the substitute worker selecting a posted position via an Internet communication link; and

secure via the Internet communication link the substitute worker who selected the posted position to fill in for the absent worker.

29. (Previously Presented) The system of claim 28 wherein the database contains worker records for a single organization.

30. (Previously Presented) The system of claim 28 wherein the database contains worker records for a plurality of unaffiliated organizations.

31 (Previously Presented) The system of claim 28 wherein the list of one or more positions that need to be filled by one or more substitute workers comprises positions from two or more organizations.

32. (Previously Presented) A method comprising:  
posting a list of one or more positions of one or more absent workers that need to be filled by a substitute worker who is qualified to fill the one or more positions in response to a substitute worker connecting to a server, where the list is generated using worker records of the one or more absent workers and a substitute record for the substitute worker connecting to the server;  
receiving a response from the substitute worker selecting a posted position via an Internet communication link; and  
securing via the Internet communication link the substitute worker who selected the posted position to fill in for the absent worker.

33. (Previously Presented) The method of claim 32 wherein the database contains worker records for a single organization.

34. (Previously Presented) The method of claim 32 wherein the database contains worker records for a plurality of unaffiliated organizations.

35. (Currently Amended) The ~~system~~ method of claim 32 wherein the list of one or more positions that need to be filled by one or more substitute workers comprises positions from two or more organizations.

36. (Previously Presented) A computer-readable medium bearing instructions being arranged to cause one or more processors upon execution thereof to:

posting a list of one or more positions of one or more absent workers that need to be filled by a substitute worker who is qualified to fill the one or more positions in response to a substitute worker connecting to a server, where the list is generated using worker records of the one or more absent workers and a substitute record for the substitute worker connecting to the server;

receiving a response from the substitute worker selecting a posted position via an Internet communication link; and

securing via the Internet communication link the substitute worker who selected the posted position to fill in for the absent worker.

37. (New) A substitute fulfillment system comprising:

a database comprising worker records, said worker records having information associated with workers for one or more organizations;

a server coupled to the database, the server is configured for:

receiving absentee information relating to a first worker via at least one communication link coupled to the server;

generating and posting an open position on a website using the worker record associated with the first worker;

receiving a response from a second worker selecting the posted position on the website via an Internet communication link; and

securing via the Internet communication link the second worker who selected the posted position.

38. (New) The substitute fulfillment system of claim 37 wherein each of the least one communication link is selected from the group consisting of a telephone communication link or an Internet communication link.

39. (New) The substitute fulfillment system of claim 37 wherein the first worker and second worker work for a single organization.

40. (New) The substitute fulfillment system of claim 37 wherein the first worker and second worker work for different organizations.

41. (New) The substitute fulfillment system of claim 37 further comprising an interactive voice response system controlled by the server for interacting with a second worker via at least one telephone communication link whereby the second worker is secured for filling in for the first worker.

42. (New) The substitute fulfillment system of claim 37 wherein the server is further configured to receive a message from the first worker, via the at least one communication link, and to forward the received message, via the at least one communication link, to the second worker who agrees to fill in for the first worker.

43. (New) A computer-readable medium bearing instructions for performing substitute fulfillment, said instructions being arranged to cause one or more processors upon execution thereof to perform the steps of:

receiving absentee information relating to a first worker via at least one communication link coupled to the server;

generating in response to receiving the absentee information a list of one or more second workers who can fill in for the first worker using worker records having information associated

with the first worker and worker records having information associated with at least one second worker; and

contacting at least one second worker listed on the generated list until at least one of the second worker agrees to fill in for the first worker or until the generated list is exhausted.

44. (New) A computer-readable medium bearing instructions for performing substitute fulfillment, said instructions being arranged to cause one or more processors upon execution thereof to perform the steps of:

generating a list of positions of first workers that need to be filled by second workers;

posting the list of positions of first workers that need to be filled by second workers on a website;

receiving a response by a second worker selecting a posted position on the website via an Internet communication link; and

securing via the Internet communication link the second worker who selected the posted position to fill in for the absent worker.

45. (New) A computer-readable medium bearing instructions for performing substitute fulfillment, said instructions being arranged to cause one or more processors upon execution thereof to perform the steps of:

generating a list of positions of first workers that need to be filled by second workers in response to a connection to a server;

posting the list of positions of first workers that need to be filled by second workers via an instant messaging system;

receiving a response by a second worker selecting a posted position on the website via the instant messaging system; and

securing via the instant messaging system the second worker who selected the posted position to fill in for the first worker.

46. (New) A system comprising:

a database comprising worker records having information associated with workers;

a server coupled to the database, the server is configured to:

posting a list of one or more positions of one or more first workers that need to be filled by a second worker who is qualified to fill the one or more positions in response to a second worker connecting to the server, where the list is generated using the worker records of the one or more first workers and the worker record for the second worker connecting to the server;

receiving a response from the second worker selecting a posted position via an Internet communication link; and

securing via the Internet communication link the second worker who selected the posted position to fill in for the first worker.

47. (New) The system of claim 46 wherein the first worker and the second worker work for a single organization.

48. (New) The system of claim 46 wherein the first worker and the second worker work for different organizations.

49. (New) The system of claim 46 wherein the list of one or more positions that need to be filled by one or more second workers comprises positions from two or more organizations.

50. (New) A computer-readable medium bearing instructions for performing substitute fulfillment, said instructions being arranged to cause one or more processors upon execution thereof to perform the steps of:

posting a list of one or more positions of one or more first workers that need to be filled by a second worker who is qualified to fill the one or more positions in response to a second

worker connecting to a server, where the list is generated using worker records of the one or more first workers and a worker record for the second worker connecting to the server;

receiving a response from the second worker selecting a posted position via an Internet communication link; and

securing via the Internet communication link the second worker who selected the posted position to fill in for the first worker.

51. (New) The computer-readable medium of claim 50 wherein the first worker and the second worker work for a single organization.

52. (New) The computer-readable medium of claim 50 wherein the first worker and the second worker work for different organizations.

53. (New) The computer-readable medium of claim 50 wherein the list of one or more positions that need to be filled by one or more second workers comprises positions from two or more organizations.

54. (New) A computer-readable medium bearing instructions for performing substitute fulfillment, said instructions being arranged to cause one or more processors upon execution thereof to perform the steps of:

receiving absentee information relating to a first worker via at least one communication link coupled to the server;

generating in response to receiving the absentee information a list of one or more second workers who can fill in for the first worker using worker records having information associated with the first worker and worker records having information associated with at least one second worker; and

contacting at least one second worker listed on the generated list until at least one of the second worker agrees to fill in for the first worker or until the generated list is exhausted.

55. (New) A computer-readable medium bearing instructions for performing substitute fulfillment, said instructions being arranged to cause one or more processors upon execution thereof to perform the steps of:

generating a list of positions of first workers that need to be filled by second workers in response to a connection to a server;

posting the list of positions of first workers that need to be filled by second workers via an instant messaging system;

receiving a response by a second worker selecting a posted position on the website via the instant messaging system; and

securing via the instant messaging system the second worker who selected the posted position to fill in for the first worker.
